DESCRIPTION

The MD400X Radar Transponder is a general purpose augmentation device used to enhance the tracking capability of X-band radars. Utilizable for ground and man pack, sea and airborne application, the MD400X is compatible with most tracking, navigation, and attack radars. Applications include: missile, aircraft, and drone tracking; aircraft rendezvous and refueling; ground target and drop zone location; close air support; navigation and landing aids; and identification.

The design of the MD400X utilizes the latest in modern devices and circuitry. It is all solid-state, except for the magnetron, to provide a reliable product with extremely long operating life.
